PROFILE

Computer Engineering graduate with two Python/data internships and projects in FastAPI services, data processing, analytics and document retrieval. Seeking full-time junior Python development or data roles. Comfortable building modular workflows, validating inputs and documenting implementation and evaluation limits.

EXPERIENCE

KivaCRM — Business Intelligence & Data Analysis Intern | Remote | Jul–Aug 2026

Built a modular Python application for synthetic CRM data validation, KPI calculations, customer segmentation, three-month baseline forecasts and rule-based recommendations. Produced bilingual English/Turkish dashboards and HTML/Excel reports with Pandas, Plotly, Streamlit and OpenPyXL.

KivaCRM — Data Science, AI & Python Intern | Remote | Feb–Apr 2026

Worked on Python data-analysis and machine-learning tasks with structured datasets in a software-development setting.

SELECTED PROJECTS

Turkey Fuel Prices API | Python, FastAPI, Pydantic, HTTPX

Packaged MVP converting official EPDK provincial reports into typed JSON. Added province/fuel validation, historical queries, distributor comparisons, price-change calculations and in-memory caching.

https://salfayoumi.github.io/projects/turkey-fuel-prices/

Bilingual Decision Support System | Python, Pandas, Plotly, OpenPyXL

Internship project covering validation, KPIs, segmentation, baseline forecasting and bilingual reporting. Public implementation uses synthetic CRM records and reusable Python modules.

https://github.com/salfayoumi/python-bi-reporting-system

Multilingual Document Intelligence | FastAPI, FastEmbed/ONNX, BM25, Streamlit

Arabic/Turkish/English document retrieval with citations and unsupported-answer handling. Semantic mode uses multilingual MiniLM embeddings; offline mode uses character n-grams. Includes tests, CI, Docker and a small synthetic evaluation set.

https://github.com/salfayoumi/multilingual-document-intelligence

sEMG Hand Gesture Recognition | Python, TensorFlow/Keras, Signal Processing

Graduation study on four-channel signals from 40 participants. Prepared overlapping windows, extracted 28 time/frequency features and compared neural models for hand-gesture classification. Academic project documentation is linked below.

https://github.com/salfayoumi/Hand-Gesture-Recognition-with-a-CNN-RNN-Hybrid-Module

SKILLS

Python engineering: Python, FastAPI, REST APIs, automated testing, CI, Docker, Git, Linux
Data: Pandas, NumPy, Plotly, Streamlit, OpenPyXL, SQL/MySQL fundamentals
Applied ML: scikit-learn, TensorFlow/Keras, NLP, document retrieval, signal processing

EDUCATION

BSc, Computer Engineering — Karadeniz Technical University | Graduated 2026
MSc, Physics — Karadeniz Technical University | 2026–present

LANGUAGES

Arabic: native · English: fluent · Turkish: advanced
